Dear Hiring Managers,

I would like to apply for the role of network engineer in your company. I have been closely following your company since a long time and I am thrilled to apply for this position. Currently I am doing my masters in Telecommunication from George Mason. I am studying courses in Network Security, TCP/IP and cloud computing which help me understand various aspects of the job role.

In reviewing my professional history, you will find that I also have worked as a Network engineer before I joined for my master's degree. I gained valuable experience in the very short tenure that I worked there. I worked as a support engineer and handles multiple international clients and understood the working of the industry. I was also awarded employee of the quarter for my performance. I also spent a lot of time with my senior employees who have trained me to approach various scenarios.

I believe in hard work and always motivated to do better to reach my goals. I also hold a prestigious certification from Cisco which is CCNA where scored a 908 out of 1000 in the examination. I believe I have the required skillset and knowledge for this job and always look forward to learning new things. I have a good command over my English, and I am an excellent team player. I also have experience in various software's such as Opmanager, PuTTy, Wireshark and ticketing tools which I believe is important to know as a network engineer.

I have enclosed my CV for other details, and I look forward to meeting you to hopefully schedule an interview soon. Thank you for your time.

Thanks and regards,

Namrata Rao
